Jeffersonville, IN 47130

Dear Rhonda,

I am happy to write this letter regarding my experience with Water Energizers non-chemical water treatment.

I began using Water Energizers in March, 1998 while serving as Maintenance Manager at Hi-Tech Mold and Tool in Louisville. The Water Energizers were placed in our cooling tower and two chilled loop systems. The entire time Water Energizers were in place, no chemicals were used. Water Energizers kept the systems scale-free and controlled corrosion and bacteria. In addition to these great results, I no longer had to deal with chemical barrels sitting in the mechanical room and the potential hazards associated with them.

In May 2010, I took a position with Sea-Long Medical Systems dba KY Manufacturing & Technology. I knew I only wanted one water treatment system here – Water Energizers. I immediately had your product installed. I am, once again, very happy with the performance of the Water Energizers, as well as the monthly service visits I've grown accustomed to over the past 12 years. Having our water tested monthly and receiving the results in a written report is a service I really value.

I advise anyone who wants to have effective, environmentally friendly water treatment to contact you for a system evaluation.

Sincerely,

A handwritten signature in black ink that reads "Tony Cruse".

Tony Cruse
